Homeward Bound Peter Ames Carlin,2016-10-11 A revelatory account of the life of beloved American music icon, Paul Simon, by the bestselling rock biographer Peter Ames Carlin To have been alive during the last sixty years is to have lived with the music of Paul Simon. The boy from Queens scored his first hit record in 1957, just months after Elvis Presley ignited the rock era. As the songwriting half of Simon & Garfunkel, his work helped define the youth movement of the '60s. On his own in the '70s, Simon made radio-dominating hits. He kicked off the '80s by reuniting with Garfunkel to perform for half a million New Yorkers in Central Park. Five years later, Simon's album "Graceland" sold millions and spurred an international political controversy. And it doesn't stop there. The grandchild of Jewish emigrants from Galicia in the Austro-Hungarian empire, the 75-year-old singer-songwriter has not only sold more than 100 million records, won 15 Grammy awards and been installed into the Rock 'n' Roll Hall of Fame twice, but has also animated the meaning—and flexibility—of personal and cultural identity in a rapidly shrinking world. Simon has also lived one of the most vibrant lives of modern times; a story replete with tales of Carrie Fisher, Leonard Bernstein, Bob Dylan, Woody Allen, Shelley Duvall, Nelson Mandela, drugs, depression, marriage, divorce, and more. A life story with the scope and power of an epic novel, Carlin's Homeward Bound is the first major biography of one of the most influential popular artists in American history.

Hydrocolloid Applications Nussinovitch,2012-12-06 This book offers a comprehensive introduction to the technological applications of these fascinating materials. It introduces sources, structures, properties, and food uses, and describes gums in non-food areas, their applications and their multi-disciplinary contribution to these fields, as well as examples of their uses.

Food Hydrocolloids Martin Glicksman,2020-03-27 First Published in 1982, this three-volume set explores the value of hydrocolloids in food. Carefully compiled and filled with a vast repertoire of notes, diagrams, and references this book serves as a useful reference for dieticians and other practitioners in their respective fields.

Food Gels Peter Harris,2012-12-06 The food technologist who wishes to produce a gelled product is faced with two basic options for achieving the desired effect; whether to use a protein or a polysaccharide. Although a gel can be formed by either a protein or a polysaccharide, the resultant gels have different characteristics: • Polysaccharide gels are characterised by their fine texture and transparency which is achieved at a low polymer concentration. They can be formed by heating and

cooling, pH adjustment or specific ion addition . • Protein gels are characterised by a higher polymer concentration (5-10%) and are formed almost exclusively by heat denaturation. Before reaching a final decision, the technologist must take a number of factors into consideration. The purpose of this book is to help the technologist in his choice by providing fundamental practical information, in one book, on the properties of gels (and factors which influence them) for both types of biopolymer. To help the reader, each chapter is (wherever possible) organised in the same way so that, for example, information on structure will always be available in section 2. The examples in the Applications section of each chapter are not meant to be exhaustive, but to illustrate the various ways in which the particular polymer can be used to form a gelled product.

Aziridines and Epoxides in Organic Synthesis Andrei K. Yudin, 2006-02-20 Aziridines and epoxides are among the most widely used intermediates in organic synthesis, acting as precursors to complex molecules due to the strains incorporated in their skeletons. Besides their importance as reactive intermediates, many biologically active compounds also contain these three-membered rings. Filling a gap in the literature, this clearly structured book presents the much needed information in a compact and concise way. The renowned editor has succeeded in gathering together excellent authors to cover synthesis, applications, and the biological aspects in equal depth. Divided roughly equally between aziridines and epoxides, the twelve chapters discuss: * Synthesis of aziridines * Nucleophilic ring-opening of aziridines and epoxides * Organic synthesis with aziridine building blocks * Vinyl aziridines in organic synthesis * Diastereoselective aziridination reagents * Synthetic aspects of aziridinomitocene chemistry * Biosynthesis of biologically important aziridines * Organic catalysis of epoxide and aziridine ring formation * Metal-mediated synthesis of epoxides * Asymmetric epoxide ring opening chemistry * Epoxides in complex molecule synthesis * Biological activity of epoxide-containing molecules A high-quality reference manual for academic and industrial chemists alike.

Organosulfur Chemistry in Asymmetric Synthesis Takeshi Toru, Carsten Bolm, 2008-09-08 In this first book to gather the information on this hot topic otherwise widely spread throughout the literature, experienced editors and top international authors cover everything the reader needs -- from the synthesis of chiral organosulfur compounds to applications and catalysis: * Asymmetric synthesis of chiral sulfinates and sulfoxides * Synthesis and use of chiral dithioacetal derivatives,

ylids, chiral sulfoximines and sulfinamides * Use of chiral sulfoxides as ligands in catalysis * Asymmetric reactions of alpha-sulfenyl, alpha-sulfinyl and alpha-sulfonyl carbanions. As a result, readers will be able to improve their own performance in asymmetric synthesis.

Phonetic Data Analysis Peter Ladefoged, 2003-09-26 Describing how people talk requires recording and analyzing phonetic data. This is true for researchers investigating the variant pronunciations of street names in Los Angeles, missionaries translating the Bible into a little-known tongue, and scholars obtaining data from a carefully controlled group in a laboratory experiment. *Phonetic Data Analysis* examines the procedures involved in describing the sounds of a language and illustrates the basic techniques of experimental phonetics, most of them requiring little more than a tape recorder, a video camera, and a computer. This book enables readers to work with a speaker in a classroom setting or to go out into the field and make their own discoveries about how the sounds of a language are made. Peter Ladefoged, one of the world's leading phoneticians, introduces the experimental phonetic techniques for describing the major phonetic characteristics of any language. Throughout the book there are also comments, written in a more anecdotal fashion, on Ladefoged's own fieldwork.

Linguistic Fieldwork C. Bowerman, 2015-02-10 *Linguistic Fieldwork* offers practical guidance on areas such as applying for funding, the first session on a new language, writing up the data and returning materials to communities. This expanded second edition provides new content on the results of research, on prosody elicitation, on field experiment design, and on working in complex syntax.

Biotechnology Applications in Beverage Production C. Cantarelli, 2012-12-06 Beverage production is among the oldest, though quantitatively most significant, applications of biotechnology methods, based on the use of microorganisms and enzymes. Manufacturing processes employed in beverage production, originally typically empirical, have become a sector of growing economic importance in the food industry. Pasteur's work represented the starting point for technological evolution in this field, and over the last hundred years progress in scientifically based research has been intense. This scientific and technological evolution is the direct result of the encounter between various disciplines (chemistry, biology, engineering, etc.). Beverage production now exploits all the various features of first and second-generation biotechnology: screening and selective improvement of microorganisms; their mutations; their use in genetic engineering methods; fermentation control; control of enzymatic processes, including industrial plants; use of soluble enzymes and immobilized enzyme reactors; development of waste treatment processes and so on. Research developments involving the use of biotechnology for the purpose of improving yields, solving quality-related problems and stimulating innovation are of particular and growing interest as far as production is concerned. Indeed, quality is the final result of the regulation of microbiological and enzymatic processes, and innovation is a consequence of improved knowledge of useful fermentations and the availability of

new ingredients. The Council of Europe's sponsorship of the work which led to the contributions to this volume is clear evidence of the growing need for adequate information about scientific and technological progress.

Food Antioxidants B. J. Hudson, 2012-12-06 Antioxidants are present naturally in virtually all food commodities, providing them with a valuable degree of protection against oxidative attack. When food commodities are subjected to processing, such natural antioxidants are often depleted, whether physically, from the nature of the process itself, or by chemical degradation. In consequence, processed food products usually keep less well than do the commodities from which they originated. Ideally, food producers would like them to keep better. This objective can often be achieved by blending natural products rich in antioxidants with processed foods, or by using well recognised antioxidants as food additives. In order to understand their action, and hence to apply antioxidants intelligently in food product formulation, some knowledge of the mechanisms by which they function is necessary. This is complex and of antioxidative may rely on one or more of several alternative forms intervention. Accordingly, the various mechanisms that may be relevant are discussed in Chapter 1, in each case including the 'intervention' mechanism. When present in, or added to, foods antioxidants are functional in very small quantities, typically, perhaps, at levels of 0.01 % or less.
